State Entomological Agencies cooperating

Special Report No.17

December 12, 1921.

CAMPHOR SCALE (Pseudaonidia duplex Ckll.)

A communication has just been received from Mr. T. H. Jones, Entomologist of the Experiment Station of Louisiana, dated December 8, stating that on December 4, specimens of this scale were received from Hammond, with a complaint that these insects were damaging camphor trees at that place. This is the third locality from which this insect has been recorded in Louisiana, and is located north of the extreme western end of Lake Pontchartrain, and about 50 miles from the State line of Mississippi, both in a northerly and easterly direction.

This insect is so far only recorded from Jackson and Hattiesburg, Mississippi, both of which outbreaks have been traced to shipments of nursery stock from Louisiana.
